S E R V I C E B U L L E T I N

GAME: ASTRON BELT

SUBJECT: DEMODULATOR BOARD - DIP SWITCH 1

1. The four bank of individual switches on Dip SW 1 are set up so Switch #1, 2, and 3 is in the OFF position. Switch #4 should be kept ON.
2. Dip SW 1 No. 4 determines whether to accept composite negative or positive going SYNC from the logic boards. Since the logic produces a negative going SYNC, the Dip Switch 1 No. 4 is left on.

Dip Switch 1 No. 4

ON - Negative SYNC
OFF - Positive SYNC
